## **Mondial Energy and Hot Water Products Selected by the State of Wisconsin for Solar Thermal Energy Services**

**TORONTO, October 15, 2008** -- Mondial Energy Inc of Toronto, Canada and Hot Water Products of Milwaukee, Wisconsin are pleased to announce that their partnership was selected as one of two renewable energy providers for solar thermal energy services to State of Wisconsin facilities. The state facilities which could potentially purchase solar thermal services from this contract include the 26 campuses of the University of Wisconsin, Department of Correctional institutions, and other State owned buildings.

"We applaud the State of Wisconsin for their support of renewable energy in State buildings," said Patty Hargreaves, Vice President of Business Development for Mondial Energy. "This initiative will help to break down barriers for broader adoption of solar thermal energy across the State. It is the first initiative of its kind at the State level, and we hope other states will pursue similar renewable energy initiatives in their building portfolios."

### About Mondial Energy

Established in 2004, Mondial Energy is a "Green Energy" facilitator of solar projects. Mondial pays for all design and installation costs for commercial-scale solar systems, and sells the metered generated energy at competitive rates. Recognized internationally for its renewable energy financing model, Mondial Energy strives to become the leading supplier of solar thermal energy in North America.
